

Responsive layout

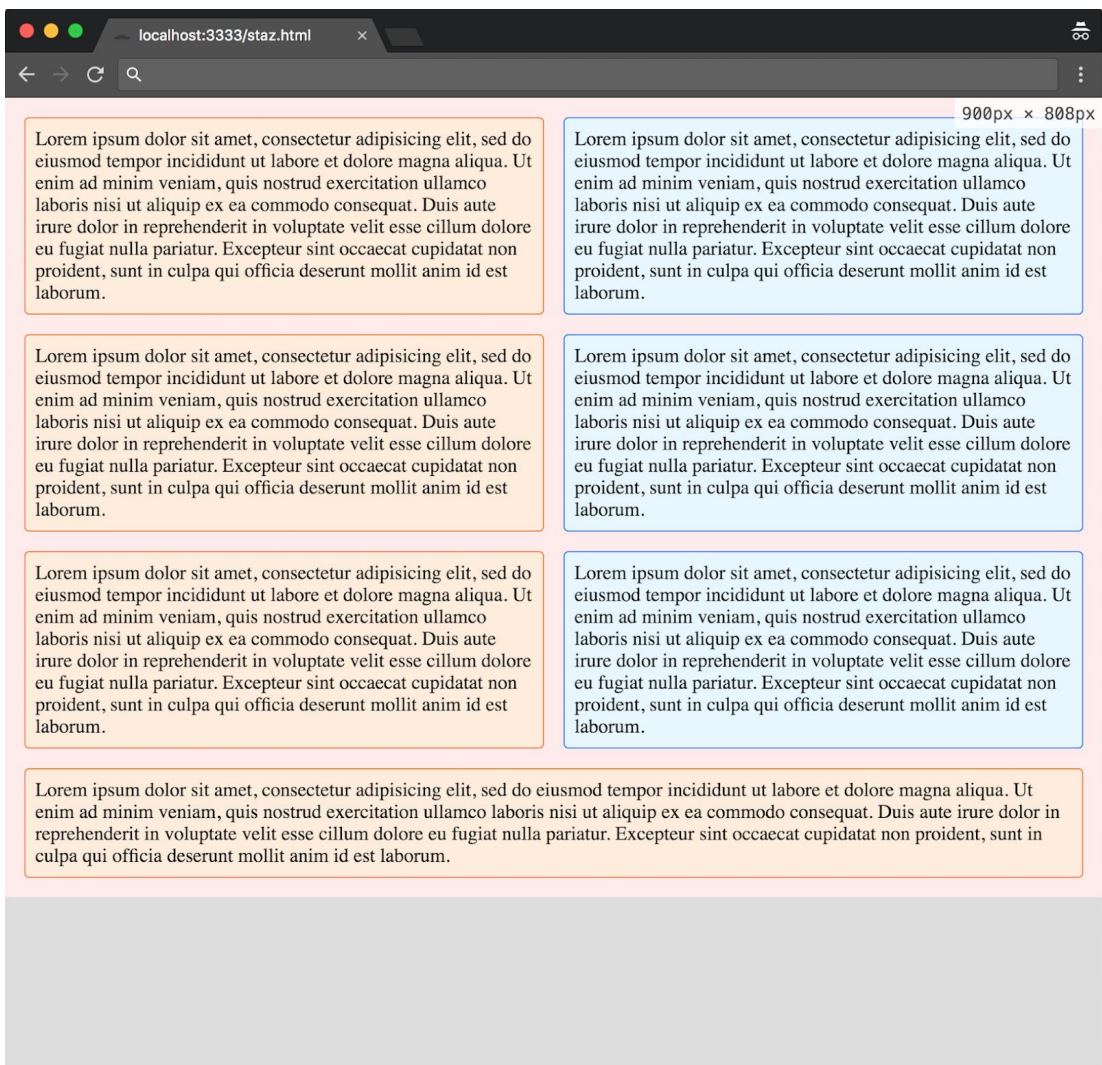

Create a view with a responsive layout. The view should contain a horizontally centered element with 7 text blocks, “*Lorem ipsum...*” fill text is fine. Here is an example of a high-resolution solution:

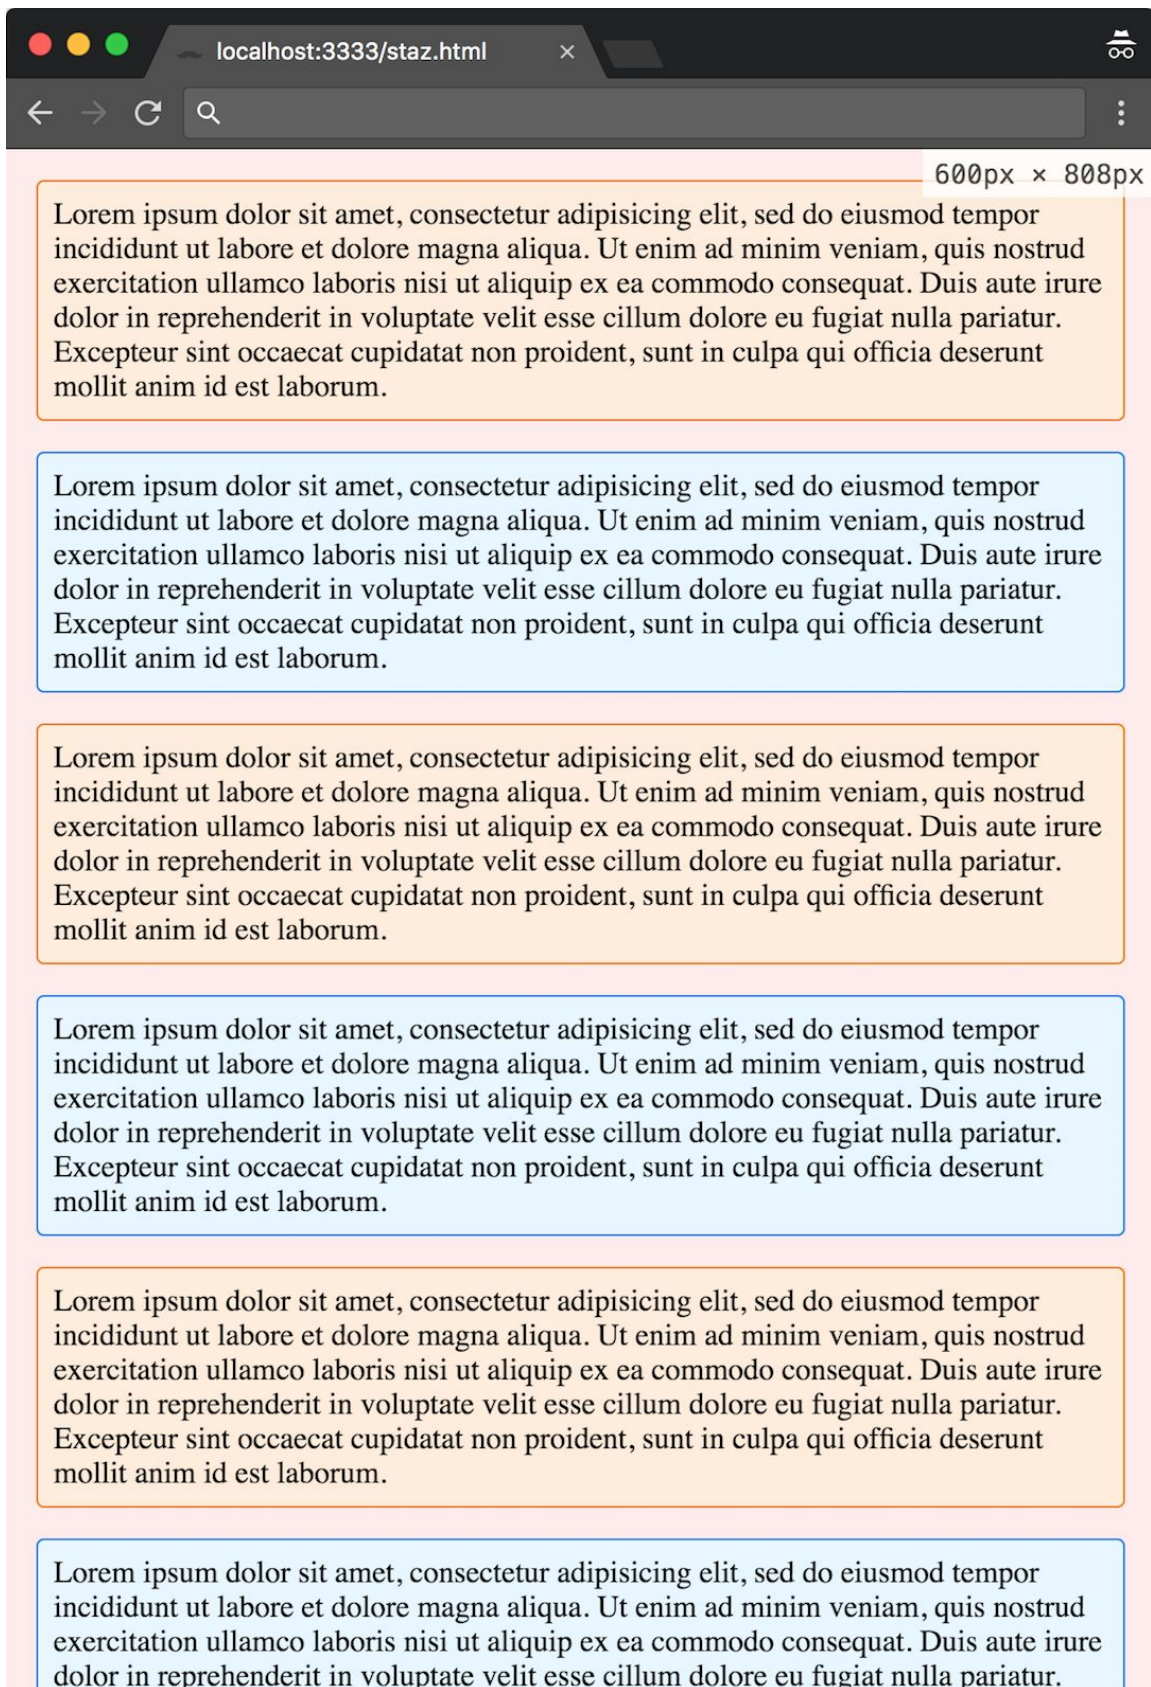

Requirements:

- The centered parent element should have a maximum width of 1500px. The text block should have a minimum width of 300px and the spaces between blocks (between the edge of the parent as well) should be exactly 16px.
- Try to keep the background colors similar to the example shown on above (no need to use exact same colors, just use two to illustrate differences).
- Write your code in plain HTML + CSS, without using external libraries

If you follow the requirements correctly, the result for smaller resolutions should look like this:

While reviewing the solution, we'll have in mind the quality of code and how it fulfils the requirements listed above. Try to provide your solution as [git](#) repository (not necessary but encouraged). Examples: [bitbucket](#) or [github](#).
